

Eligible Bachelor's in Florida

These maps visualize the relationship between the percentage of single-parent households (single mothers and single fathers) and bachelor's degree attainment rates across Florida counties. The analysis found a moderate negative correlation, suggesting that counties with higher rates of single parenthood tend to have lower levels of bachelor's degree attainment. These patterns highlight how family structure may intersect with educational outcomes and broader regional disparities.

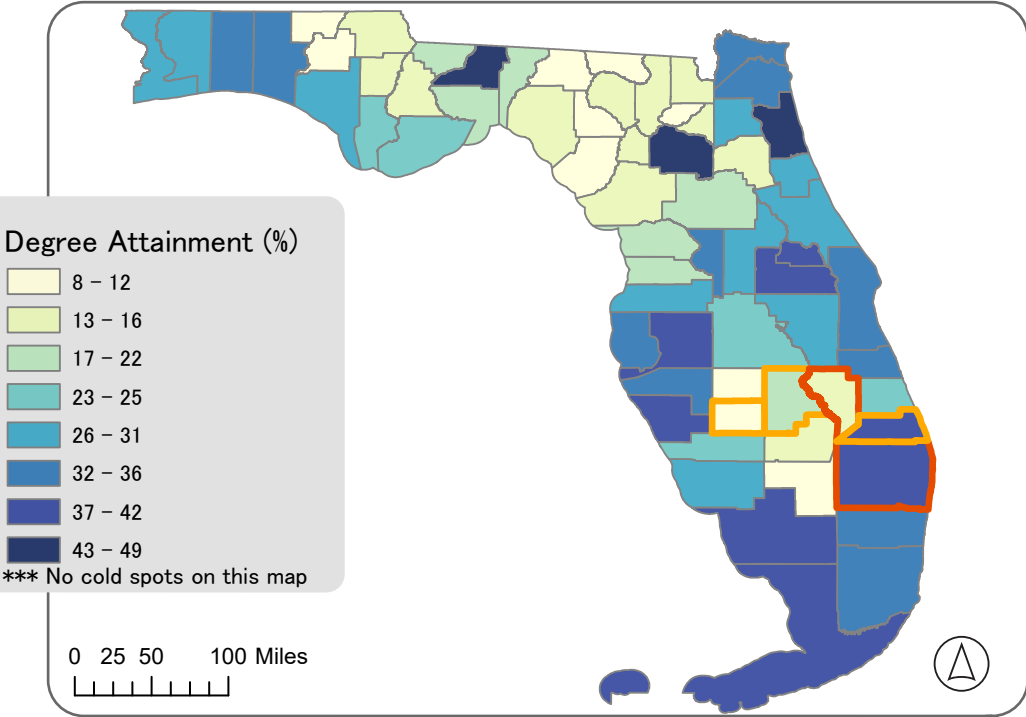

Map 1. Single Mothers vs. Degree Attainment
Map 2. Single Fathers vs. Degree Attainment

Hot Spots

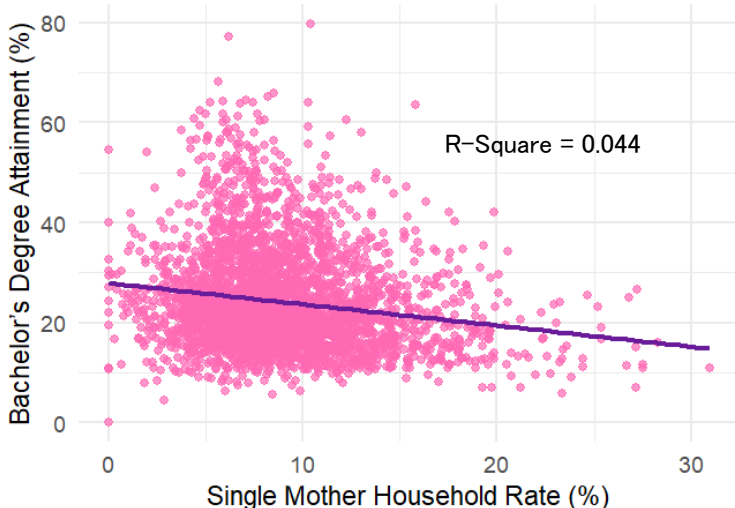

- Cold Spot (99% Confidence)
- Cold Spot (95% Confidence)
- Neither
- Hot Spot (95% Confidence)
- Hot Spot (99% Confidence)

Hot spots are areas where high single parenthood and low degree attainment cluster. Cold spots are where low single parenthood and high educational attainment cluster.
